

# 1.4x Zuiko Digital TeleConverter Lens

Zuiko Digital lenses are an integral part of an SLR system designed from the ground up for digital photography. An uncompromising system in which body and lens operate in concert to deliver the levels of resolution, contrast and control required by the world's top photo professionals.

## Zuiko Digital Lens Advantages

**Digital Specific Lens™** Zuiko Digital lenses are designed to focus light straight into an imager's pixel wells, to fill every pixel consistently. It's optical technology that delivers an image filled from center to edge with rich, accurate color, high contrast and subtle gradation. Designed exclusively for digital photography, Zuiko Digital lenses provide a level of precision that's simply unattainable from a digital body using a traditional 35mm film lens.

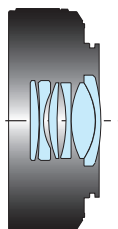

Zuiko Digital lenses deliver all the power of an equivalent 35mm lens in only half the focal length. So the 1.4x Zuiko Digital TeleConverter lens provides even greater size and weight savings.

**Smaller and Faster** Designed to take full advantage of the Olympus E-1 Digital SLR's FourThirds imager, Zuiko Digital lenses feature world-class speed in lenses that are smaller and lighter than anything comparable. It's a compact, powerful system that combines superior imaging with unprecedented mobility.

**Smart System** Zuiko Digital lenses communicate image information directly to the Olympus E-1 Digital SLR for a level of exposure accuracy that's beyond the capabilities of a passive lens.

With 6 lens elements in 5 groups, all fully multi-coated, the 1.4x Zuiko Digital TeleConverter lens is designed to deliver increased power while preserving superior image quality.

1.4x Zuiko Digital TeleConverter Lens		Stock No. 261005
Image Magnification	1.4x	
Lens Construction	6 elements in 5 groups, all multi-coated	
Dimensions (Diameter x Length)	2.7" D x 0.9" L (68 mm x 22 mm)	
Weight	6.0 oz. (170 g)
